

Stair lifts by ThyssenKrupp Access

An affordable way to add safety, convenience and comfort to your daily life.

Go to any level in your house with confidence, ease and safety. With a stair lift, all floors in your home are readily available to you. So no matter how many times you need to go upstairs to get your glasses or head downstairs to do laundry, you'll enjoy your entire home.

Either side, any angle. We can accommodate virtually every stairway shape, size and angle, carrying you smoothly in a straight line, around corners and up multiple flights ... on either side of the staircase.

Always within reach. You can send the lift up, call it down and use it to carry light items either way. There are several different types of control styles: push-button, pendant or toggle switch.

Compact design. Seat, arms and footrest fold up easily when not in use.

Blends with your home. Our stair lifts are designed to complement your home décor. We offer several fabric or vinyl choices for each lift.

Key safety features:

- ✓ seat belt;
- ✓ obstruction sensors stop the lift should something block its path;
- ✓ seat swivels away from the stairs, locking into place while you get on or off the lift;
- ✓ constant pressure controls stop the lift when you release the controls;
- ✓ final limits switches that prevent the lift from traveling beyond the track.

"My husband is the go-getter in the family ... always has been. He hurt his knee last year and we bought a stair lift so he could use the stairs with ease. I'm pleased about how nice it looks in the house and also surprised at how much I use it. It's become such a convenient appliance for both of us."

Ellen Scheer

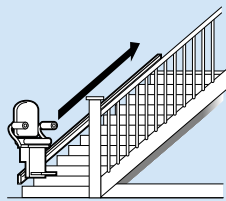

It is estimated that in our lifetime, we take around **250,000 journeys up and down our stairs**. Over time, climbing your stairs can become increasingly difficult. A ThyssenKrupp Access' stair lift is the easiest and most affordable solution that can help you to once again enjoy the independence and freedom of your own home.

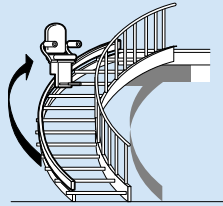

Quick Guide to Staircases

Stairways can be defined as one of 4 basic types:

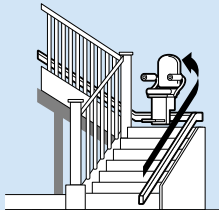

- Straight
- Flat curve
- Short radius spiral
- Large radius spiral

■ Straight stairs

■ Curves and spirals

■ Straight stairs with flat or sloped landing (flat curve)

Straight

The simplest stairway and the most common. A straight stairway maintains a constant slope and does not curve or change directions.

Flat curve

The flat curve stairway typically has two straight sections joined by a flat landing. The stairway walls tend to be flat.

Short radius spiral

The short radius stairway typically has two straight sections joined by a sloped landing (pie-shaped steps). The stairway walls tend to be flat.

Large radius spiral

A large spiral stairway may have a straight section but can, in some very elaborate spirals, have no straight sections. The stairway walls are usually curved. Complete spiral stairways with no straight sections are considered large radius spirals.

ThyssenKrupp Access' offers stair lift solutions for all of the stairways listed.
