

FLOW II Stair Lift

A solution for every staircase

If you have a spiral, curved or turning staircase then you realize the need for a customized stair lift that can move along with the intricate design of your unique stairs. ThyssenKrupp Access solves this need with the Flow II, our innovative stair lift model that offers features and functions that a standard straight stair lift cannot.

Elegant and thoughtful design, plus an array of features, allows the Flow II to access virtually any floor of a home with style—then fold-away safely and compactly. This lift is available in a variety of rail colors and upholstery options for a completely custom look.

The Flow II is one of our most versatile lifts; it functions as a curved stair lift but can literally do just about anything inside your home. Whether its sharp corners, 90 degree bends, steep slopes, twisted spirals or straight as an arrow, this one-of-a-kind lift makes freedom easy and luxurious.

Lifting capacity:	275 lbs.
Operation:	<ul style="list-style-type: none">- Control unit, joystick operation (also functions as key), choice of 4 joystick types- Wireless call and park station with push button- Every unit contains 2 C-cell batteries, radio frequency: 866 MHz, approved
Drive system:	Battery (24V) rack and pinion drive system
Rail:	Low profile single tube, constant diameter of 3" (8cm)
Incline:	-70° up to +70°
Speed:	Max. 29 fpm (0.15 m/s)
Technical conformity:	CE approved, ETL and cETL pending
Standard specification:	Wireless call and park station at top and bottom of stairs, foldable seat and footrest
Optional items:	Automatic swivel chair, installation at the inside or outside of the stairs, parking bend or parking place halfway up the stair for 'out of the way' parking of the stair lift, attendant controls.
Warranty:	2 years on drivetrain and component parts

Key Features

Joystick

The joystick functions as both the control device and the key. With a light touch of the joystick in the desired direction, your lift will operate. Furthermore, there are three different types of standard joystick functions to choose from to ensure that there is an option to meet your needs. The ergonomic joystick offers you the lightest control, while the attendant control can help those who are unable to operate the lift themselves.

Automatic swivel

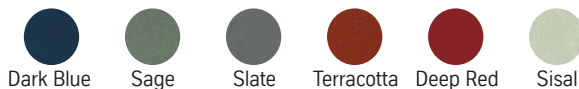

The Flow II can be optionally provided with an automatic swivel during the ride. This ingenious system, on which we are the sole patent holder, makes it possible to install your rail close to the steps, attracting less attention and allowing for more space with low underpasses. In addition, the chair turns automatically at the top and bottom of the stairs, allowing you to get on and off safe and easy.

Rail

Our team of stair lift engineers have designed the Flow II to use our unique “swan neck” rail that stops near the bottom step to leave access to open corridors or doorways and dramatically reduce the risk of falls in the home. The low profile single tube design is very discrete, takes up minimal space and comes in four different color options to match your home’s decor.
